Supermarket Management System

An application for managing and keeping track of sales and expenses in a supermarket, it will do all the calculations concerned with shopping and purchasing. With this application you don't need paper based calculation. First, when you open the application, you will face the login page, after logging in, you are taken to the home page of the application.

There are several buttons at the left side of the home page, these buttons are for manipulating different pages of the application. Each button will take you to a new page, dedicated to a specific function. It has several pages, like: users (for storing different users of the application), customers (a table dedicated to save customers), orders(a page with 3 tables for completing shopping process), view orders(for keeping track of sales and remained products), products(existing products in the supermarket) and some more.

In order view page, you can add products to your cart and at the end there will be produced a printed version of the bill with the date and time the shopping was done.

Finally, it facilitates the process of shopping and purchasing things in a supermarket, doing all calculations and keeps track of product amounts and customers. It is an ease in shopping 😊.
